DETAILED ACTION

1. This Office Action is in response to the Amendment filed 09/12/2008. Claims 1-7 and 16-17 were canceled and claim 19-20 have been added. Claims 8-15 and 18-20 are now pending, wherein claims 8-15 and 19-20 are drawn to a filler layer and claim 18 is drawn to a solar cell module.

Allowable Subject Matter

2. Claims 8-15 and 18-20 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Tsuzuki et al. (JP 2003-046105) and Kitagawa (JP 2002-009309).

Summary of Claim 8:

A filler layer for a solar cell module containing a <u>silane-modified resin</u>	
obtained by polymerizing	an ethylenic unsaturated silane compound
	a polyethylene for polymerization
wherein the filler layer for a solar cell module has a <u>gel fraction of 30% or lower</u> after production of a solar cell module when the filler layer is used in the solar cell module, and further wherein <u>practically no silanol condensation catalyst is contained in the filler</u>	

Tsuzuki et al. disclose a filler layer for the solar battery module, comprising a resin film composed of a resin composition including the copolymer of α -olefin and an ethylene unsaturated silane compound or its condensation product, wherein the ethylene unsaturated silane compound includes "vinyltrimethoxysilane, vinyltriethoxysilane..." and is in an amount of 0.001 to about 15 wt%; and the α -olefin can be ethylene ([0010]; [0012]; claims 1-3). Tsuzuki et al. further disclose that the gel molar fraction is 0% immediately after film formation and does not change at 150°C for 15 min and the silanol condensation catalyst of an organic base, inorganic acid, organic acid, etc. are used ([0011]; [0035]-[0036]). Thus, Tsuzuki et al. do not teach or fairly suggest the claimed filler layer for a solar cell module, wherein the filler layer comprises, in particular, a gel fraction of 30% or lower after production of a solar cell module when the filler layer is used in the solar cell module and contains practically no silanol condensation catalyst.

Kitagawa discloses a modified olefin resin sheet for a solar battery module, the resin sheet comprising an olefin resin modified by an ethylene unsaturated silane compound $[R^1Si R^2_n Y_{3-n}]$ with R^1 , R^2 , and Y being an ethylene unsaturated hydrocarbon group, a hydrocarbon oxy group, a hydrocarbon group, an organic group than can be subjected to hydrolysis] and having a gel fraction of 30 % or less, wherein the content of the ethylene unsaturated silane is 0.1-10 wt% and the olefin resin is an ethylene resin (abstract; [0014]; [0026]). Kitagawa further disclose that the gel fraction is 60% or higher after the product of a module ([0020]). Thus, Kitagawa do not teach or fairly suggest the claimed filler layer for a solar cell module, wherein the filler layer comprises, in

particular, a gel fraction of 30% or lower after production of a solar cell module when the filler layer is used in the solar cell module and contains practically no silanol condensation catalyst.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
